

ASECO S-130 Upgrade Powered by SESSCO UTHA

Before Controller Upgrade

After Controller Upgrade Using SESSCO UTHA

Upgrading ASECO S-130 tri-temp handler with **SESSCO UTHA** (Universal Test Handler Architecture) is an effective way to manage the challenges associated with maintaining legacy handler. Overall performance is substantially improved and maintenance cost is kept to minimum. Features that are the hallmark of ASECO are retained while improving design and process associated with reliability and quality issues. An upgraded ASECO S-130 handler will give a worry-free operation for many more years to come. Future Proof, SECS GEM Ready

Upgrade includes the following:

- Replace old controller with SESSCO UTHA - 80ns/step all integrated controller
- Replace CRT screen with Touchscreen HMI
- Install sort parity detector
- Replace sensors with Keyence fiber optic sensor
- Replace motor drivers and motors with Oriental motors
- Replace valves and solenoid with SMC
